

INSTINCT

Instinct

Skip to the good part.

PROBLEM

Dating apps stop at the match.

Users still swipe for hours, stare at blank message boxes, and negotiate time and place. Most matches never become dates.

SOLUTION

AI runs the full funnel.

Instinct handles swipes, icebreakers, venue, and time. Users skip the homework and go straight to meeting someone real.

Four steps to date night.

- Learn & swipe: AI learns taste, then swipes in the background.
- Break the ice: suggested openers when there is a match.
- Get the plan: venue and time picked for both profiles.
- Show up: one notification. Put the phone away.

Massive category, broken UX.

Online dating is a multi-billion dollar market dominated by apps that optimize engagement, not outcomes. Instinct optimizes for dates.

Premium subscription.

Freemium waitlist and onboarding. Paid tier unlocks full AI autopilot, unlimited date planning, and priority matching.

Early signal.

- Live waitlist landing page with interactive product demo.
- Strong early interest from Gen Z daters tired of swipe fatigue.
- Building mobile app for iOS launch in 2026.

THE ASK

Raising a seed round.

Building the first dating app where AI runs the entire funnel so users skip to the good part.
